

So The Event object is like say is the big one that contain inside it another sub object like **Event Schedule, paper .. etc** ,
to get all think clear let's break down what is component of *Event Object*

The Attributes of Event

- Title
- Date start
- Date end
- Topics Covered
- Description

The Sub Object Event

- Event Schedule
 - Let's see in timeline of event each day has main subject
 - we put **name date like day1, subject of it**
- Paper
 - Link with Events(List of the Events)
 - Presentation Type(Oral, Poster, Workshop)
 - Title
 - Description
 - link with author(role who create paper)
 - upload pdf (Front-end can upload without back-end)

*Note: My user model will change some fields like add fields of **institution/Affiliation(university/hospital)**",
background of user*

The Questions part

- Like the part of participant how can register in event object, mean first when join to event i go like list of user who connect with event?
- So the filtering of Event provide **Topics Covered (AI, Cyber security)** Saby here i don't sure correct me ?

Contact Us

Attribute

- Link with user ok, then can get all information of him

- Subject(When arrive of it i call u Saby)
- Message(Your problem)
